Technical Datasheet Sensor Modules with Modbus RTU Protocol with RS485 Interface

The Sensor modules communicate via RS485. The port can drive distances up to max 700 meters without the use of any repeater (*this feature however also depends on the signal strength of the Modbus Master Device*).

The RS485 Digital Sensor module is sturdy, low power usage and easy to use.

PT100/1000 Module: -

The Sensor modules are mounted on DIN rail mountable casing and with exposed connectors and LED indicators. The DIP switch for Slave ID and Baud rate are placed inside the enclosure.

Handles 100 Ω to 1k Ω (at 0°C) Platinum RTDs (PT100 & PT1000), Compatible with 2-, and 3-Wire Sensor Connections.

The design of the modules incorporates 'resettable Fuses' to safeguard against reverse polarity connection both for **Power** and **Communication** port.

BAUD RATE DESCRIPTION

- For Baud rate Selection, DIP SW is used as per the diagram.
- Pulling up the switch will make Baud rate active.
- If no selection is made 9600 will be default Baud rate.
- When u change the Baud rate in the Module power 'ON' condition, pls press the reset button to get Change to affect.

Baud Rate	DIP SWITCH			
	1	2	3	4
9600	OFF	OFF	OFF	OFF
19200	ON	OFF	OFF	OFF
38400	OFF	ON	OFF	OFF
57600	OFF	OFF	ON	OFF
115200	OFF	OFF	OFF	ON

SLAVE ID DESCRIPTION

For Slave ID Selection SW is used to Set The SLAVE ID .

For Slave ID DIP Switch **LSB** is "1" follow through "4" is **MSB**.

Slave ID Confirmed through below Device ID table .

IF Eg. Slave ID 1 is Needed to be selected Switch number 1 should pulled up other three should be selected down side. So "1 0 0 0" will be selected as Slave ID 1.
